

# Project Report

## 1.Introduction

### 1.1 OVERVIEW

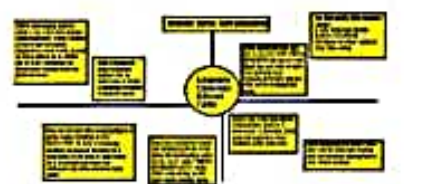

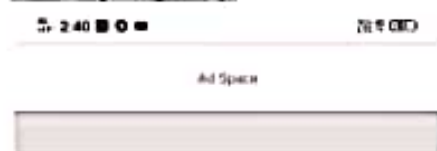

With a virtual background, you'd be able to look professional and presentable. You can even take a casual photo of your office layout and add that image as the virtual background for your videos.

### 1.2 PURPOSE

The Virtual Background feature allows you to display an image or video as your background during a Zoom meeting, which can provide you with more privacy or a consistent and professional look for a presentation.

## 2.Problem definition & Design thinking

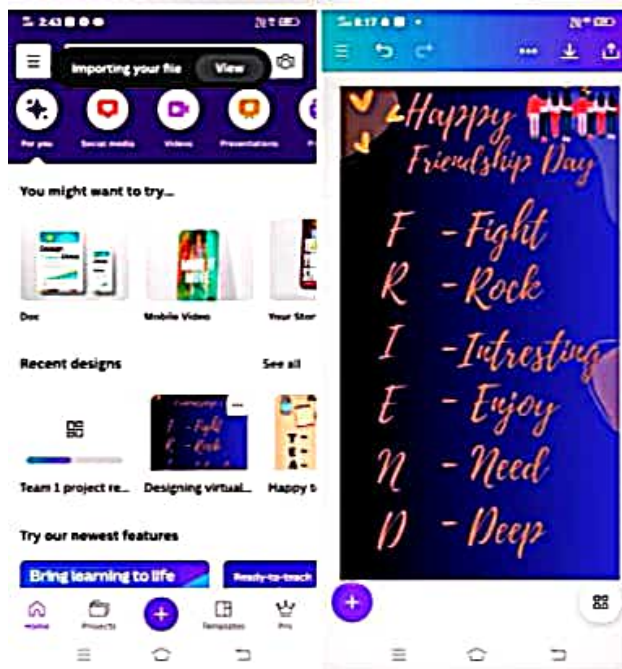

### 2.1 Empathy map

### 2.2 Brain Storm map

### 3.Result

#### 4. Advantage & Disadvantage

##### Advantage

A virtual background allows you to display an image (or video) as your background instead of whatever is naturally behind you. You can even use photographs of nicely decorated office space as your virtual background and then improve it by adding a touch of your brand identity.

##### Disadvantage

Virtual backgrounds are cool technology at work but aren't perfect to look at all the times. Sometimes they just don't look good due to tech lag and issues, and sometimes they don't work well with your computer (hello Zoom updates that seem to mess things up every other week!).

#### 5. Application

In the Zoom web portal, you can add custom images as backgrounds for all Zoom Rooms in your account or for a specific room, floor, or location.

You can also customize Zoom Rooms digital signage content to share important messages when the room is not in use or the scheduling display background to use a custom image on your scheduling display device.

#### 6. Conclusion

In this project is useful to learn about canva features.
